This map has been produced in accordance with PPS25: Development and Flood Risk and its Practice Guide. The map identifies the estimated flood extents in an extreme flood event using the modelling outputs produced for this SFRA where this has been undertaken. Beyond the modelled reaches, either recent Environment Agency modelling or Flood Zone 2 has been used for the 1 in 1,000 year event. The SFRA modelled reaches are shown on Figure 1.1 of the Maps Index.

The Main River information shown in the SFRA is provided by the Environment Agency; the centreline data may deviate from that shown on basemapping due to inherent differences in data resolution. Further information on Main Rivers is provided on the Environment Agency’s website. The mapping of culverted sections of watercourse is a strategic screening only based upon Ordnance Survey 1:10,000 mapping and should be confirmed for more detailed studies such as site specific Flood Risk Assessment. The canals layer does not necessarily cover all the canal arms, but the modelled overtopping/breaching and hydraulic interactions with rivers and other waterbodies is complete and accurate as appropriate for a Strategic Flood Risk Assessment.

The map should be used to apply the Sequential Test and Exception Test.

Manchester City, Salford City and Trafford Councils Level 2 Hybrid SFRA

1 in 1000 Year And 1 in 1000 Year With Climate Change

Flood Extents
